Re: Application for Machine Learning Engineer (m/w/d)

I am excited to apply for the Machine Learning Engineer position at Empion, where I can leverage my technical expertise in machine learning, data engineering, and cloud computing to drive business growth and innovation. With a strong passion for building scalable data platforms and deploying machine learning models, I am confident that my skills and experience make me an ideal fit for this role.

Throughout my career, I have developed a strong foundation in machine learning, data engineering, and cloud computing. As a Data Engineer at Folio3, I improved vitiligo segmentation accuracy to 94% and increased speed by 5x using AI algorithms, and deployed models with Docker and FastAPI. I also developed a real-time tennis foul detection system with TensorRT, reducing compute cost and time by 6x. Additionally, I managed MLOps pipelines on AWS SageMaker, addressing YOLO model data drift, and maintained Kubernetes infrastructure. My experience with Python, SQL, Cloud (AWS/GCP/Azure), Docker, and data and ML tools such as Spark, Databricks, and FastAPI aligns with the requirements of this role.

I am excited about the opportunity to join Empion and contribute my skills and experience to drive business success. I am confident that my passion for machine learning, data engineering, and cloud computing, combined with my experience working in agile teams and collaborating with cross-functional teams, makes me a strong fit for this role. I look forward to discussing my application and how I can contribute to Empion's success. Thank you for considering my application.

Sincerely,

Muhammad Haider Zaidi
